Assessment
Written examinations

What you will study?

Core Maths is designed for students with a grade 5 or above in GCSE Maths who want to take the subject further, but aren't moving forward with another Level 3 mathematics course.

This is a course where you will study mathematics that will support your other A Level courses. You will develop mathematical modelling, evaluating and reasoning skills that you can apply to your other areas of study, as well as being valuable in any future career. You will develop skills in the communication, selection and interpretation of mathematics.

A large part of the course will focus on personal finance and solving real life problems encountered by adults.

“We've found that Core Maths feels a lot more relevant to what the students might expect to do at university.”

“The lessons are completely different to traditional maths.”

“The lessons on income tax and National Insurance have been the best motivation to work hard at school. I need to get a good job – you lose so much of your wage!”

Future Pathways

This qualification will support you in other subject areas such as:

Psychology; Sciences; Business Studies; Computer Science; Geography; Economics; Design and Technology.
